/136 cont./

142 The tribe at Gam in particular consists almost exclusively of comparatively large people who, even after a thorough washing, display a decidedly darker coloration than the other Auin.

162 According to my observations, there is something like one to two women for each man, and from two to three children for each woman.

162 847 [862] In this connection I would like to mention that newborn children are always killed if the mother is still nursing a child, which continues until about the third year of life. The killing is done immediately after birth by the mother, who buries the newborn child alive. The father has nothing to do with it. Since marital [853] intercourse continues during the nursing period and since this period lasts for about three years, it follows that approximately every third child is reared while those born in the meantime are killed without exception. This might well be a principal factor in the unquestionable decline in the population.

592 595 Since each woman has her special windscreen (hut), the man lives alternately with one and then another of his wives; the latter in turn have their children living with them, and it therefore follows that about three to four persons occupy each hut.

221 361 The size of the settlements (villages) is quite indefinite and changes according to the circumstances. During the dry season a settlement is formed usually by one to two families, whereas during the period of ample veld food, in other words, toward the end and shortly after /137/ [map appears here] /138/ the rainy season, sometimes up to 30 families join together to form a "village." In April, 1908, about 400 men were living in a settlement near Sidonitzaub. If their dependents are included, one will arrive at a figure of at least 1,000 persons.

[701] All the men are armed warriors.

161 [136] As has already been noted, one can clearly observe a decrease in the population, which, judging by its rapid progress, can be designated as swiftly approaching extinction. Aside from infanticide and malaria, the decrease of wild game may also be given as a reason for the population decline, since this decrease makes food more difficult to obtain. Older Auin state that in former times attacks by lions caused heavy losses.

unmarried son or two, and their daughters' children. Bushmen are polygynous, and a man is allowed by custom to have as many wives as he can afford, depending on how well he hunts—usually a man can afford only one wife, sometimes two (often a pair of sisters), and once we heard of a man with four wives. For this reason there are often more women than men in a band.

The immediate family, a man, his wife, or wives, and children, is the only solid social unit; otherwise the small bands are always breaking up and recombining with other small bands as the structures of single families change, through marriages, divorces, deaths, or as the family decides to pay a prolonged visit to a different group of relatives.

Any Bushman will either be related by blood or marriage or will be acquainted with all the other Bushmen in his area but this is as far as Bushmen go in their affinities. They do not recognize as their own people strange Bushmen who speak the same language; in fact, they suspect and fear them as they do any stranger.

We have visited four of the Bushman language groups, two of which we stayed with for long periods of time. In 1951, after a survey expedition to learn where Bushmen could be found, we went into the Nyae Nyae area of South-West Africa, close to the border of Bechuanaland, to look for Kung Bushmen. We found a band living near a waterhole, as it was June, the drought of the year, and we stayed with them for four months. At first only a few Bushmen were there, but as the news spread that we were friendly, more and more people came to visit us and receive presents of tobacco and salt, for Bushmen love to smoke but rarely have tobacco, which they get in trade. Also, most of the Bushmen had never seen a European before, none had ever seen a European woman, and they came by dozens to sit together in a cluster

could have found his shallow pit at any time of the day or night.

Nobody was there; everyone had run away. We sat down and waited while Gai put his hands to his mouth and shouted, trying to summon the people back again. When nobody came or even answered him, he flung his pipe to the ground and marched off to find them among the bushes, alternately shouting to his hidden relatives and muttering to himself, for they might be far away and the day was getting warm.

We sat in the middle ground between the depressions so that we wouldn't risk stepping on or crushing anybody's hidden things, for, without knowing it, a European can in a moment trample through a Bushman's cache, breaking the delicate bone or wooden objects, bending the reed arrows, or crushing eggshell beads. Also, among certain groups of Bushmen, every fire has a man's side and a woman's side, determined by the position of the fire as you face the doorway of the scherm, the man's side being on the right, the woman's on the left. If a man sits on the woman's side, or where a woman has been sitting, he will become impotent and will also lose his power to hunt, and if a woman sits where a man has been sitting, she will get a disease in her vagina. Something intangible, invisible, but dangerously powerful, remains on the ground. We did not know which side was which of this werf's fires, or even for sure where the fires were; we did not even know that the Gikwe had this custom, for we had learned it from Kung Bushmen, but we knew that if they did they would not welcome our contaminating their ground. We would have liked to look around, but the best thing we could do was to keep our big boots and our bodies away from their delicate, fragile, almost invisible community.

622 leadership, the people may turn quite informally to some other man for leadership in their daily life—ask him for help and advice, fall in with his plans. Such a leader has no authority and receives no honors or rewards.

Headmanship is inherited by the eldest son from the father. If that son dies or leaves the band, the headmanship passes to the next eldest son.

No strictly formulated rules, insofar as we know, provide for further succession. We have no observations of our own of situations in which a headman had no son.[10]

622 621 571 The rule of succession does not provide for a headmanship to pass collaterally to a headman's younger brother. However, a younger brother may set up a band of his own in the same territory if he does not prefer to live under the headmanship of his older brother or if he does not continue to live with his wife's people. The younger brother has his own rights to the veldkos and water that derive from his father and he can share them with his family and band. Nevertheless, as long as a son of the headman in rightful succession is living in the territory, he has higher authority and is responsible for the overall planning. Should the principal headman's band die out or realign itself, the collateral band led by the younger brother would become the principal one.

621 622 602 571 The bonds that bring the !Kung into membership in bands are the same consanguineous and affinal bonds on which a nuclear family is formed: the bonds of parent-offspring, siblings, and spouses. Everyone who lives in a !Kung band is linked by one of these bonds with the headman, sometimes directly or sometimes in a chainlike manner through one or two other persons. A description of a typical band will illustrate this point. Band II of Gautscha has forty-one members. The headman, Gao Beard, has two wives and four young children. With Gao Beard live his younger brother, one of his younger sisters, each with spouse and children, and his elderly, dependent and widowed mother. Gao asked his first wife's father, Old ǂToma, whom he likes very much, to join his band. Old ǂToma brought with him into the band his wife, a married son with wife and child, two younger sons, his wife's sister, and her son by a now divorced husband. He also brought sixteen other persons—Gau and his people. Gau belongs to another band but was at the time living in Band II because he had married, as a second wife, Old ǂToma's wife's sister and, middle-aged though they are, he was in bride service to her people. After a time Gau can choose whether to stay on in Band II or to go back to the band in which he originated. He said that he thought he would decide to stay with Old ǂToma and Gao Beard because he likes Old ǂToma and because Gao Beard has a mangetti grove.

621 423 People retain throughout their lives their membership in the band in which they were born and their rights to its veldkos and water resources.

obvious from the fact that although several chiefs were present, there was no common supreme chief.[1] Such gatherings are only temporary in nature, and produced by some special circumstance. They cannot therefore be regarded as indicative of the normal groupings of the Bushmen.

Social Structure of the Band

Within the band the only division is into families. The family among the Bushmen consists of a man and his wife or wives, together with their dependent children. It is a unit of outstanding importance in their social and economic life. The members of a family usually live together in one hut; the children until they are mature remain under the direct control of their parents, are nourished and are educated by them; husband and wife jointly contribute to the maintenance of their household, and the domestic tasks and industries are apportioned between them according to fixed custom. The family, moreover, has much freedom of movement, and, as already mentioned, single families will often roam about separately for a while within the territory of their band.

The relationship between the different families constituting a band is seldom defined clearly by the various observers. In particular the information available about the kinship organization of the Bushmen is very inadequate. Miss Bleek has recently published lists of relationship terms for each of the three main linguistic groups defined by her.[2] From these it appears that among all the Bushmen there are, in addition to various descriptive terms of relationship, also certain terms applied not to individuals but to whole groups of different relatives, while still others are used reciprocally between people standing in a particular relationship to each other. Relationship terms of the last two types, when found in other societies, are usually indicative of a definite organization of the community on the basis of kinship; and it is probable therefore that some such organization exists among the Bushmen as well. Unfortunately the lists given by Miss Bleek appear to be drawn from vocabulary sources rather than from an actual study of kinship itself, and cannot therefore be used with any degree of confidence. In any case they throw

[1] Op. cit., 138, 155. It should be mentioned here that the figures given by Kaufmann are, as a rule, far in excess of those given by other writers of about the same time and on the same district (e.g. Müller, German official estimate), and cannot therefore be accepted without question.

361 [606] exists among the *Hei-//om* in common with other Bushman tribes." Within the circle of huts towards the south is the hut of the adolescent [882] young girls, and towards the north that of the adolescent young men; mature marriageable young women occupy huts next to those of their parents in the circle. Old widows and widowers, as also [589] visitors from any neighbouring group, live outside the circle of married people. The dancing place is to the west within the circle.

"The large tree (*/heis*) in or near the centre of the *//gaus* is reserved 361 as a meeting place for men for ceremonial and other purposes. Women 562 are entirely forbidden to approach it or to join the men when gathered underneath it. To this, however, there is one exception, namely, [622] the wife (*gei-khois*) of the *gei-khoib* may go to it to obtain fire for kindling the principal fire (*/ou-/ais*) or for other menial purposes when required by her husband. With the exception of the chief nobody is permitted to live in close proximity to this */heis*. Under [372] it is made the first fire (*/hei-/ais*) on the establishment of a new [224] *//gaus* and underneath it is deposited, for distribution, all meat killed in the chase."[1]

Fourie speaks of this camp arrangement as being present among 114 all the Bushmen in the northern parts of South-West Africa,[2] but the 361 only confirmation for this statement is given by Vedder, who just hints at a similar arrangement of the camp among the Kung. "Where several families live together," he says, "the huts are ranged in a circle, the head of the group ("Dorfälteste") living in the east."[3]

Each family within the group has its own hut. Where the families 592 are polygynous, the wives may live together in the same hut if they [595] get on well; otherwise each will build herself a separate hut. Children sleep with their parents until strong enough to go about by themselves. The bigger boys and young bachelors sometimes share [882] a hut together, but generally they sleep out in the open under a tree, and only in very wet weather will their mothers in co-operation build them a hut. Unmarried girls too old to sleep with their parents also share a separate hut. An old widower may live alone, or with [589] a boy; a widow and her little children, where they do not live alone, are generally quartered with the girls.[4]

342 The huts themselves (Plate VI) are somewhat crude, consisting as a rule merely of a semicircular shelter of branches planted into

exchanged from hut to hut, the women going to one hut, the men to another, and so on. Only the owners sit in a hut, while the visitors gather round the fire outside. The little children play about everywhere, the bigger boys and girls by themselves. There is no fixed time for going to sleep. As a rule the people turn in to bed fairly early, but if it is a fine evening dancing may be started and kept up till late, everybody taking part except the old people and the little children.[1]

Food and Fire

The Bushmen will eat almost anything that can be eaten. Of animal foods the favourite is game of all kinds, when it can be obtained, and they are also very fond of hare, spring hare, guinea fowl, korhaan, partridge, ostrich, and other birds, as well as birds' eggs. Fish too are eaten wherever they can be caught, and among the Bushmen of the Okavango swamps are a staple article of diet. Anteaters, ant bears, tortoises, porcupines, bull frogs, snakes, and lizards are greatly relished, while among insects locusts, scorpions, beetles, young bees and honey, termites, flying ants and ants' eggs are also eaten. In fact all kinds of living animals are made use of as food, with the almost universal exception of the baboon and the hyena—the former "on account of its being so like a man", the latter "because it eats human corpses".

The most important vegetable foods in the Southern and Central Kalahari are the *tsama* (*Citrullus vulgaris*), "uintjies" (*Cyperus edulis Dtr.*), *Grewia* berries, and the *//noun* (*Bauhinea esculenta*); in the Namib the */naras* fruit (*Acanthosicyos horrida Welw.*) forms almost the sole article of diet when in season; while as one proceeds northwards various fruit-bearing trees appear, such as the wild fig, palm, omungete nut, wild orange, omuande, and omuve. In addition numerous other varieties of edible roots, berries, cucumbers, tubers, melons, and ground nuts appear in great profusion during and after the rainy season, when they form the principal part of the daily menu.[2]

Much of the food is eaten raw, but the Bushmen know how to prepare and cook it. Each family prepares its own food. Cooking
